Yossi Manzur

Software Engineer

yossiman100@gmail.com linkedin.com/in/yossi-manzur yossimanzur.com +972 50-2235877

SUMMARY

- Software Engineer with hands-on project experience in C/C++, Linux, data structures, operating systems, multithreading, networking, and distributed systems.
- Built practical projects across distributed systems, backend and Full Stack development, with experience in debugging, modular design, APIs, databases, and system-level problem solving.
- B.Sc. in Bioinformatics and Computational Biology, adding a strong analytical and data-oriented perspective to software development.

EDUCATION & TRAINING

Software Engineering Program | Infinity Labs R&D | 2025–2026
- Intensive hands-on training in C/C++, Linux, data structures, operating systems, multithreading, IPC, networking, debugging, and modular software design
- Developed practical software projects involving system architecture, distributed components, backend development, and end-to-end implementation

Bachelor of Science (B.Sc.), Bioinformatics and Computational Biology | Bar-Ilan University | 2024
- Relevant Coursework: Algorithms, Databases, C/C++ Programming, Object-Oriented Programming, Operating Systems, Bioinformatics, Computational Biology

TECHNICAL SKILLS

- **Core:** C/C++, Java SE, Linux, OOP, Data Structures, Operating Systems, Multithreading, Networking
- **Development:** Git, Docker, REST APIs, Node.js/Express, React
- **Data:** PostgreSQL, SQL, Python for academic data analysis

PROJECTS

AI Banking Application | Full Stack
- Built an end-to-end banking application using React, Node.js/Express, PostgreSQL and REST APIs, including authentication, account management, dashboard and money-transfer flows.
- Integrated an AI assistant into the application and worked across backend logic, database integration, API design and end-to-end debugging.
- Project showcased at yossimanzur.com

IOTIS – Distributed Storage System | C++, Linux
- Developed components for a distributed storage system with multiple storage nodes, distributed reads/writes and backup mechanisms.
- Worked with multithreading, networking and modular system design in a Linux environment.

MEIG1 Gene Mutation & Expression Analysis | Academic Project, Bar-Ilan University
- Analyzed cancer genomics and RNA expression data and compared biological cohorts using statistical methods and public genomic databases.
- Used Python-based data processing and Wilcoxon testing to support the biological analysis.

ADDITIONAL EXPERIENCE

Emergency Medic & Ambulance Team Lead | Magen David Adom | 2020–2025
Part-time alongside B.Sc. studies; led ambulance teams in high-pressure clinical environments.

Import, Inventory & Brand Operations | Padani Jewelers | 2016–2019
Handled import and inventory operations, later coordinating an Italian jewelry brand across product selection, store distribution and sales tracking.

MILITARY SERVICE

Israel Defense Forces – Nahal Brigade | 2013–2016
Mandatory service and reserve duty
