SUMMARY

- B.Sc. graduate in Bioinformatics and Computational Biology with hands-on academic experience in Python-based data analysis, complex datasets, statistical testing, and cohort comparisons.
- Completed an intensive Software Engineering Program at Infinity Labs R&D, with practical project experience in SQL, PostgreSQL, backend development, REST APIs, and system integration.
- Combines analytical problem-solving, software engineering fundamentals, and proven responsibility and team leadership in high-pressure environments.

TECHNICAL SKILLS

- **Data & Analytics:** Python, SQL, PostgreSQL, Data Processing, Statistical Analysis, Wilcoxon Testing, Cohort Comparison
- **Software & AI Tools:** TypeScript, JavaScript, Node.js, Express, React, REST APIs, Git, Docker, Codex CLI, C/C++
- **Systems & Foundations:** Linux, Databases, Debugging, Operating Systems, Networking, Distributed Systems

SELECTED PROJECTS

MEIG1 Gene Mutation & Expression Analysis | Academic Project, Bar-Ilan University
- Processed and analyzed cancer genomics and RNA-expression datasets using Python and public genomic data sources.
- Compared biological cohorts and applied Wilcoxon statistical testing to investigate gene-expression differences between tumor and healthy tissues.
- Research team screened 23,374 VCF files using Python scripts to investigate mutation patterns.

AI Banking Application | Full Stack
- Built and deployed a TypeScript banking simulation (React, Express, PostgreSQL) with a dashboard, transaction history, and user transfers.
- Integrated an OpenAI/LangGraph assistant via MCP, with PostgreSQL-backed checkpoints and explicit user approval before transfer execution.

IOTIS – Distributed Storage System | C++, Linux
- Developed components for a distributed storage system involving multithreading, networking, modular architecture, and distributed read/write operations.

EDUCATION & TRAINING

Bachelor of Science (B.Sc.), Bioinformatics and Computational Biology | Bar-Ilan University | 2024
- Relevant Coursework: Algorithms, Databases, C/C++ Programming, Object-Oriented Programming, Operating Systems, Bioinformatics, Computational Biology

Software Engineering Program | Infinity Labs R&D | 2025–2026
- Intensive hands-on training in C/C++, Linux, data structures, operating systems, multithreading, IPC, networking, debugging, and modular software design
- Developed practical software projects involving system architecture, distributed components, backend development, and end-to-end implementation

ADDITIONAL EXPERIENCE

Emergency Medic & Ambulance Team Lead | Magen David Adom | 2020–2025
Part-time alongside B.Sc. studies; led ambulance teams in high-pressure clinical environments.

Import, Inventory & Brand Operations | Padani Jewelers | 2016–2019
Handled import and inventory operations, later coordinating an Italian jewelry brand across product selection, store distribution and sales tracking.

MILITARY SERVICE

Israel Defense Forces – Nahal Brigade | 2013–2016
Mandatory service and reserve duty
